Gore GR Joint Sealant

GORE Joint Sealant, the original form-in-place gasket, is the most cost-effective alternative to sheet gasketing for large equipment flanges. GORE Joint Sealant can be used in practically every type of sealing application, and it is ideal for sealing complex surfaces and rough or pitted flanges. GORE Joint Sealant minimizes leak potential, lost production, maintenance time, and risk of catastrophic failure. It is the most reliable means of optimizing long-term system performance.

Gore GR Joint Sealant		Physical Properties
Color		White
Service Temperature		-450 to 600 ° F
pH Range		0 to 14
Service Pressure		vacuum to 3000 psi
